ROHITH DHARSHAN H

Automation & Production Engineer | Linux (RHEL) | Bash | AWS
rohithdharshan05@gmail.com • Bengaluru, Karnataka • linkedin.com/in/rohith-dharshan8 • github.com/Rohz08

PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building and running automation and operational tooling on Linux (RHEL) for high-availability trading platforms used by a leading Indian brokerage, a fantasy-sports platform, and an investing platform. Hands-on with Bash, AWS (S3, CLI), feed monitoring, failover, and live incident support across Production, UAT, Backup, and Disaster Recovery environments. Focused on automating manual steps to prevent human-error incidents. Fast learner, calm under pressure, and clear communicator.

WORK EXPERIENCE

Software Engineer – Automation & Production Engineering | OmneNest Technologies Pvt Ltd | Jan 2024 – Present

Bengaluru, Karnataka • NEST Trading Platform • Clients: brokerage, fantasy-sports and investing platforms

- Designed, developed, and deployed **10+ production Bash automation scripts** across UAT, Production, Backup, and DR environments, covering log archival, S3 backup pipelines, feed monitoring, and binary data extraction. Prioritised removing error-prone manual steps to prevent incidents caused by manual mistakes.
- Built **push_s3_bucket**, an S3 backup pipeline for a fantasy-sports platform that discovers storage directories at runtime, compresses files from the last 24 hours, and uploads through named AWS CLI profiles. Running live in Production and UAT; removed the manual after-market-hours upload.
- Built **feeds_check**, a multi-exchange feed health monitor (NSE, BSE, MCX) with adapter auto-detection, multicast IP display, and version diagnostics. Replaced manual checking, shows instantly whether exchange data is coming in, speeds up diagnosis, and saves roughly 20–35 minutes each morning before market open.
- Developed **spans_check** with weekend-aware date logic to validate NSCCL/BSE and MCX span files, replacing a daily manual check across 20 servers (roughly 20–35 minutes saved per day) and flagging missing or outdated files per exchange.
- Authored **custom_archive_and_truncate_log** for a client's Production, Backup, and DR environments, archiving application and reconciliation logs with truncate-in-place to preserve active file handles.
- Managed log lifecycle for 6 script types: pattern-matched detection, tgz compression, configurable retention, and tee-based dual logging with color-coded status for fast diagnostics.
- Handled a **primary server outage** (firmware fault per the infra team's RCA): escalated to my manager first, confirmed other servers at the location were unaffected, and brought the backup live in about 20 minutes, including a ~15-minute switchover and post-switch validation.
- Provided live incident support on production trading infrastructure, diagnosing feed disruptions, adapter failures, and log errors in time-critical pre-market windows, and delivered Root Cause Analysis (RCA) reports to clients by email.
- Kept clients updated during live incidents and market-hours disruptions, tracked tickets in Salesforce, and worked with product stakeholders to prioritize and plan automation projects.

TECHNICAL SKILLS

Scripting: Bash (functions, arrays, error handling, strict mode), Python (basic)
Cloud: AWS CLI: S3 operations, named profiles, recursive listing, archival pipelines; AWS Cloud Foundations (course)
Operating Systems: Linux (RHEL), Unix: process management, cron, file system operations
Monitoring: Log analysis, feed validation, process health checks, adapter monitoring (NSE / BSE / MCX)
Networking: TCP/IP, DNS, multicast, adapter configuration; CCNA modules 1–3
Environments: Production, UAT, Backup, Disaster Recovery
Languages: English (professional), Tamil (native), Telugu and Hindi (conversational)

EDUCATION

Bachelor of Computer Applications (BCA), Mysore University (Distance) | 2025 – Present (alongside full-time work)
Diploma, Computer Engineering & IT Infrastructure, NTTF (Nettur Technical Training Foundation) | 2021 – 2024

CERTIFICATIONS & TRAINING

- **AWS Cloud Foundations**, Amazon Web Services, Jan 2024
- **CCNA Modules 1, 2 & 3**, Cisco Networking Academy, Aug 2023
- AI Fluency: Framework & Foundations, Anthropic, Apr 2026
- Cyber Security Job Simulation, Deloitte (via Forage), Aug 2025
- Masterclass: Ground Control Station Operations, ITCA, Feb 2024

ACHIEVEMENTS

3rd Prize, Pan India CanSat & Drone Applications Competition (Team Lead) | May 2024
Dayananda Sagar University, organised by CSST & Dept. of Aerospace Engineering. Led a team in a two-day national-level competition; wrote the core code and tuned sensor sensitivity through repeated testing.
